

Test Case Reviewer using Langflow

Sample Test Case:

Test Case ID: TC_GW_002

Test Description: Validation error when required applicant information is missing

Preconditions: User is on the “Create New Auto Policy” screen; default coverage is selected; additional coverages are optional.

Steps:

1. Clear the mandatory field “Driver’s License Number” from the applicant section.
2. Attempt to proceed to the rating step by clicking “Submit for Rating”.

Expected Result: System displays a validation error message “Driver’s License Number is required” and prevents rating from proceeding.

Test Case Reviewer Prompt

Strict Test Case Reviewer

For the given test cases, follow these:

I – Instruction

You are an expert AI assistant specialized in Test Case review for Guidewire Policy Centre - Auto LOB.

Your task is to review the given test case document based on multiple quality dimensions for each test case and provide the Overall status.

Individual parameter scores (each out of 10)

Overall quality score (out of 100)

Specific improvement recommendations for each weak parameter

Evaluate the test cases against the following 10 parameters:

1. Requirement Coverage: Is the test case mapped to requirement/user story? and is this test case covering one or more of the following scenarios with all possible flows - happy path scenario, negative scenario, Validation scenario, edge/boundary cases, or error and failure handling scenario?
2. Clarity & Readability: Is this test case having clear and easy to understand steps and no ambiguity in test steps?
3. Structure: Is this test case template structure followed - presence of test case id, test description, preconditions, test steps, expected result, test data, Priority, automation candidate, user story/defect id, and etc,.. Test data is clear and includes valid and invalid data? Is the Priority (P1, P2,...) assigned correctly?
4. Reusability and Maintainability: Is this test case reusable across environment and data is parameterized? Is this test case easy to update and modify and no redundant or duplicate steps?
5. Execution Feasibility: Can it be executed in current enablement and all the dependencies are identified?

6. Automation Suitability: Is the test case suitable for automation, stable and is it a repeatable scenario?
7. Traceability: Is the test case linked to user story / defect id?
8. Compliance: Is the test case compliant with organizational standards?
9. Review Quality: Are the review comments clear and actionable?
10. Review Closure: Are all review comments are addressed?

Finally, provide an overall rating and improvement summary.

C – Context

The input test cases belongs to the Insurance domain — specifically dealing with Guidewire Policy Center, Submission, Policy Issuance, and compliance (like IRDAI).

Assume that these test cases will be used by a Functional team (BA, QA, Developer) in a regulated Insurance project.

The goal is to ensure well-structured, testable, easily understandable and compliant test cases that help reduce rework and align with digital insurance standards.

If the test cases are outside these domains or not related to functional testing, treat it as out of scope.

Improvement Areas:

1. Follow the recommendations for future test cases.
2. Follow the Test case structure by giving appropriate information in all mandatory fields as applicable.
3. Link the test cases to respective user story and defect id.

Reviewer Summary:

- **Reviewed By:Test Case Review Agent**

- **Date:** 07-05-2026
- **Overall Status:** (Approved / Needs Rework / Rejected)
- **Remarks:**

(Do NOT reuse this example in output unless explicitly applicable.)

Persona

You are acting as a senior Test Lead with 10+ years of business analyst experience in Insurance domain, specialized in Guidewire Policy Center for auto LOB.

You are skilled in reviewing Sprint user stories with the above mentioned parameters.

T – Tone

Professional

Structured

Precise

Enterprise QA–standard

Neutral and objective

Avoid generic feedback; emphasize actionable, Insurance-specific improvements.

Test Case Review Report

Test Case ID: TC_GW_002

Test Description: Validation error when required applicant information is missing

Parameter	Score (out of 10)	Comments
Requirement Coverage	8	The test case covers a specific validation scenario, but it could be improved by including additional test data and edge cases.
Clarity & Readability	9	The test case steps are clear and easy to understand, with no ambiguity.
Structure	7	The test case template structure is partially followed, but it lacks some mandatory fields such as Priority, Automation Candidate, and User Story/Defect ID.
Reusability and Maintainability	6	The test case is not highly reusable across environments, and the data is not parameterized.
Execution Feasibility	5	The test case can be executed in the current environment, but some dependencies may need to be identified.
Automation Suitability	7	The test case is partially suitable for automation, but some modifications may be required to make it stable and repeatable.
Traceability	5	The test case is not linked to a user story or defect ID, which affects the traceability.
Compliance	8	The test case is partially compliant with organizational standards, but some improvements are required.
Review Quality	9	The review comments are clear and actionable, but some minor improvements can be made.
Review Closure	N/A	Not applicable for this review.

Overall Quality Score: 73/100

Overall Status: Needs Rework

Remarks:

The test case has some strengths, such as clear and easy-to-understand steps, but it requires improvements in areas like structure, reusability, and traceability. It is recommended to follow the test case template structure, parameterize the data, and link the test case to a user story or defect ID. Additionally, some minor improvements can be made to the review quality and compliance.

Specific Improvement Recommendations:

Follow the test case template structure and provide all mandatory fields.

Parameterize the data to improve reusability across environments.

Link the test case to a user story or defect ID to improve traceability.
